DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it should avoid using phrases which can be implied, such as, "The present invention provides" in line 1. Furthermore, the abstract should not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. . . Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 4 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Wasek.

Wasek discloses an adjustment device for adjusting the height of a washstand (12), the adjustment device comprising: a base (14, 16); a sliding device (28) fixed on the base, the sliding device further comprising a sliding cover (29) and a set of guiding

tracks (24); a sliding beam (the back side of vanity 13), the washstand (12) being fixed on the sliding beam, and the sliding beam connecting to the sliding device (28) in a way of moving up and down to enable the washstand move “up and down relative to the sliding beam” similar to that of the instant invention; and an actuating device (40), the actuating device for providing a potential energy to lift back the washstand to a desired position, the actuating device further comprising a control switch to flip the actuating device (see col. 3, line 51 et seq.); wherein, the washstand is fixed on the sliding beam, the sliding beam connects to the sliding cover so that the washstand moves up and down only along the set of guiding tracks, and the height in which the washstand moves is adjusted by the actuating device. The actuating device is a pneumatic stick, a hydraulic device, or other height adjustment devices. The sliding cover is a sliding bearing (see col. 3, lines 13-22).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The other non-applied references, cited on form PTO-892, disclose other adjustment devices similar to the instant invention.
